Craftsy

2_jubair_3

Team Members:

1. Alister Gan Ee Shern
2. Kathryn Keck
3. Quinn Weidenaar
4. Ji Xian Fu

Actors

1. Viewers: Have the ability to:

- Browse and Read Posts in the Feed:
View the latest posts, tutorials, and projects shared by others. Posts might include images, patterns, or crafting tips.
- Search for Users, Projects, Tutorials, or Groups:
Use the search bar to find specific creators, project types (e.g., “knitting,” “woodworking”), or join interest-based groups.
- View Pattern or Project Details and Comments:
Open detailed pages for tutorials or projects to see full instructions, materials used, and community feedback.
- Like or Comment on Posts:
Engage with the community by liking posts or leaving supportive comments and feedback.
- Join Public Groups and View Discussions:
Participate in group conversations, view members’ posts, and learn from shared experiences in interest-based communities (e.g., “DIY Crafts”)

2. Trainer: Have the ability to:

- Post Tutorials:
Create and upload tutorials (text, images, or videos) on various crafting topics—sewing, crochet, painting, etc.—to teach other users.
- Manage Own Content:
Edit or delete their tutorials, update resources or links, and manage comments on their posts.
- Engage with Viewers:
Respond to questions, provide feedback, and interact with learners through comments or group discussions.

3. Administrator: Have the ability to:

- Moderate Content:
Review and take down posts or tutorials that violate community guidelines (e.g., offensive language, plagiarism, inappropriate content).
- Manage Users:
Suspend or permanently delete users who repeatedly break rules or post harmful content.
- Oversee Groups:
Monitor group activity and ensure discussions remain respectful and on-topic.

Non-Functional Requirements

- 1) Navigation bar with Feed, Search, groups, patterns, and profile

This is a usability non-functional requirement. Having a navigation bar with 5 simple tabs makes it easy for the user to navigate through the main features of our app.

- 2) Support a minimum of 4 active users

Users should be able to use the app at the same time. Specifically, group messaging and groups feature should be able to interact with multiple active users.

- 3) Images have alt text

Users/admins are prompted to add alt text to uploaded pictures to make the app accessible to all users.

Tables & Fields

- Users: Tracks information related to a user's account
 - Users ID: Primary Key
 - Users username
 - Users display_name
 - Users password
 - Users bio
 - Users email
 - Users craft_specialties
 - Users followers
 - Users following
 - Users profile_pic: Stores image of user
- Follow: Tracks the following and followers relationship between users
 - Follow ID: Primary Key
 - Follow accepted: boolean to determine whether the follow relationship exists
 - Follow follower_id: Foreign key to the User table
 - Follow following_id: Foreign key to the User table
- Notifications: Tracks the notifications based on the Users' activity
 - Notifications ID: Primary Key
 - Notifications created_at: time of notification
 - Notifications is_read: boolean to keep track of whether the notification has been read
 - Notifications message: content of the notification
 - Notifications reference_id
 - Notifications title
 - Notifications type: Specify the type of notification (Follow-Request, Message, etc)
 - Notifications user_id: Foreign key to the users table
- Groups: Tracks information about different groups and their members
 - Groups id: Primary Key
 - Groups craft
 - Groups description

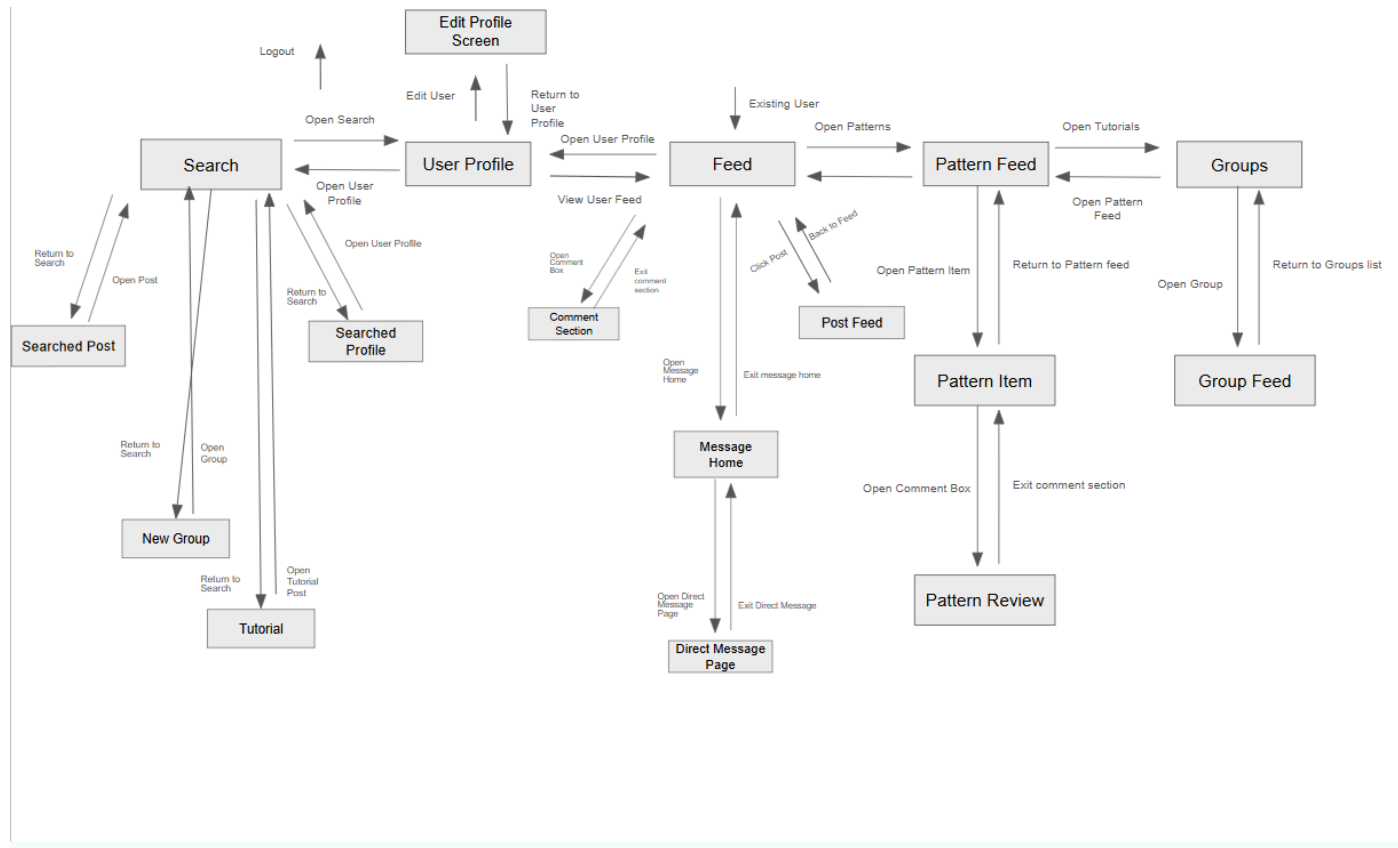

- Groups group_name
- Groups is_private
- Groups member_count
- Groups group_admin_id: Foreign key to users Table
- Group_members: Tracks information about the members in the group
 - Group_memebers group_id: Primary Key
 - Group_members user_id: Foreign Key to users Table
- Group_join_requests: Tracks information about requests from users to join private groups
 - Group_join_requests id: Primary Key
 - Group_join_requests is_accepted: Boolean
 - Group_join_requests group_id
 - Group_join_request user_id: Foreign Key to users Table
- Tutorial: Tracks information regarding tutorials posted by users
 - Tutorial id: Primary Key
 - Tutorial category
 - Tutorial description
 - Tutorial file_name
 - Tutorial file_path
 - Tutorial file_type
 - Tutorial file_url
 - Tutorial title
 - Tutorial user_id: Foreign Key to users table
- Feed: Tracks projects posted by each user
 - Feed username: foreign key to users table
 - Feed projectName: primary key
 - Feed projectType
 - Feed supplies
 - Feed projectDesc
 - Feed projectPic
 - Feed visibility
 - Feed date
 - Feed comment: list of comments

- FeedComment id: primary key
- FeedComment username: foreign key to users
- FeedComment text
- FeedComment likes
- FeedComment date

- Patterns: Tracks patterns posted by users and their ratings from other users
 - Patterns patternName: primary key
 - Patterns user: foreign key to users table
 - Patterns patternType
 - Patterns rating
 - Patterns image
 - Patterns link
 - Patterns difficulty
 - Patterns description
 - Patterns supplies
 - Patterns date
 - Patterns comment: list of comments
 - PatternComment id: primary key
 - PatternComment username: foreign key to users
 - PatternComment text
 - PatternComment likes
 - PatternComment date

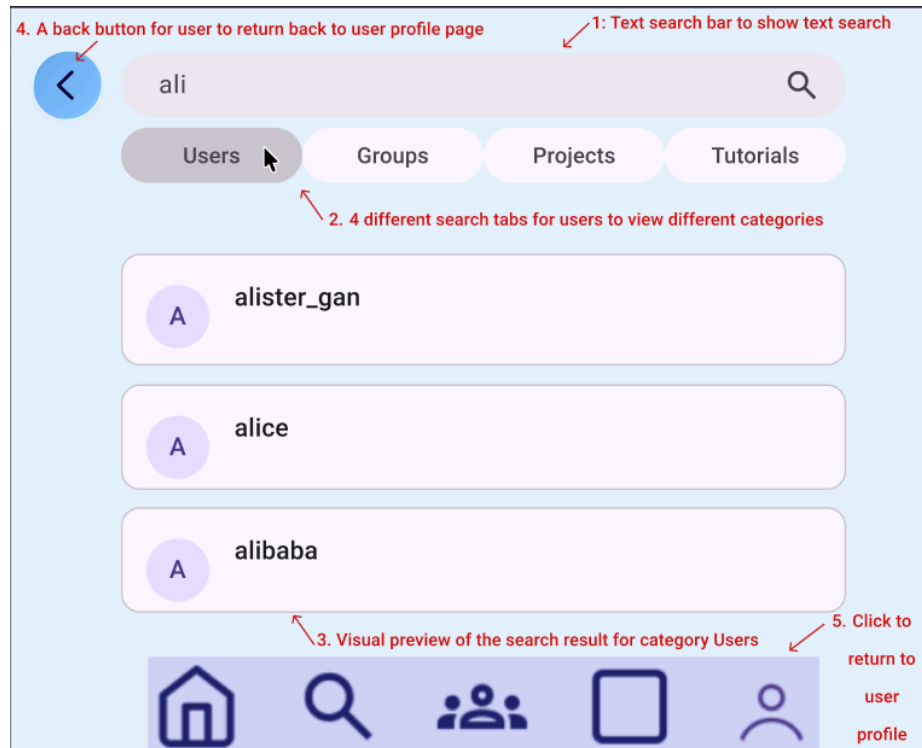

- Messages: Tracks messages between users and user groups
 - Messages id: primary key
 - Messages sender: foreign key to users table
 - Messages receivers: foreign key to users table, a list that could be one user or multiple users if a group
 - Messages text
 - Messages date
 - Messages reactions: list of reactions
 - MessageReaction type: specific reaction given
 - MessageReaction user: foreign key to users table
 - MessageReaction date
 - Messages repliesTo: the message that it replies to, null if none
 - Messages photo

Screen Flow Diagram

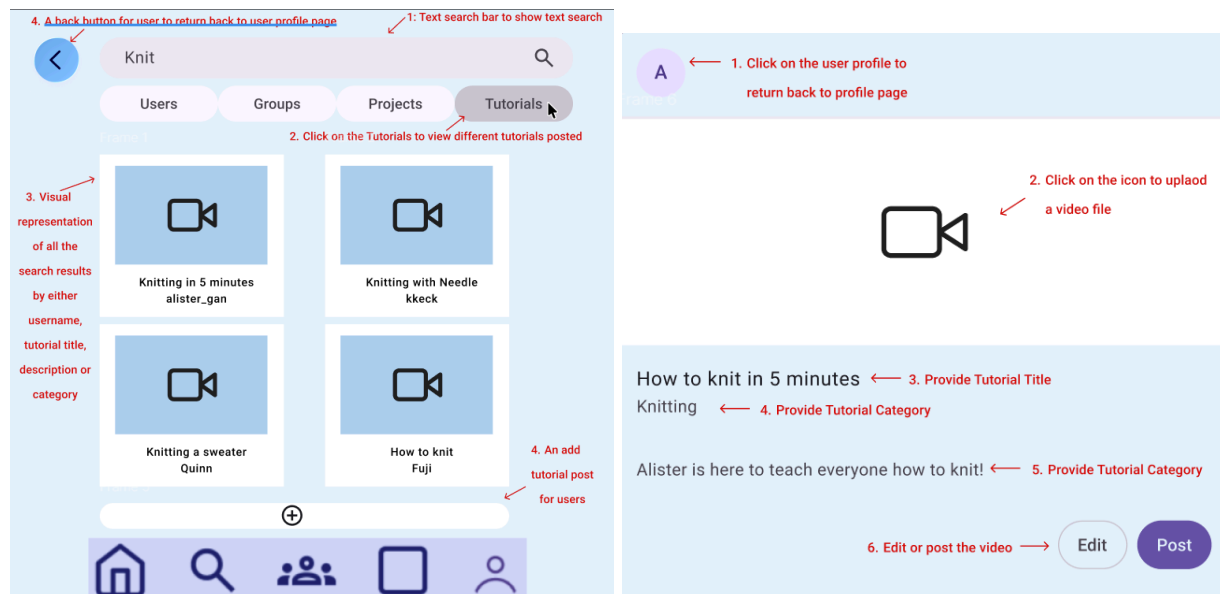

Screen Sketches

Search Page- Alister Gan

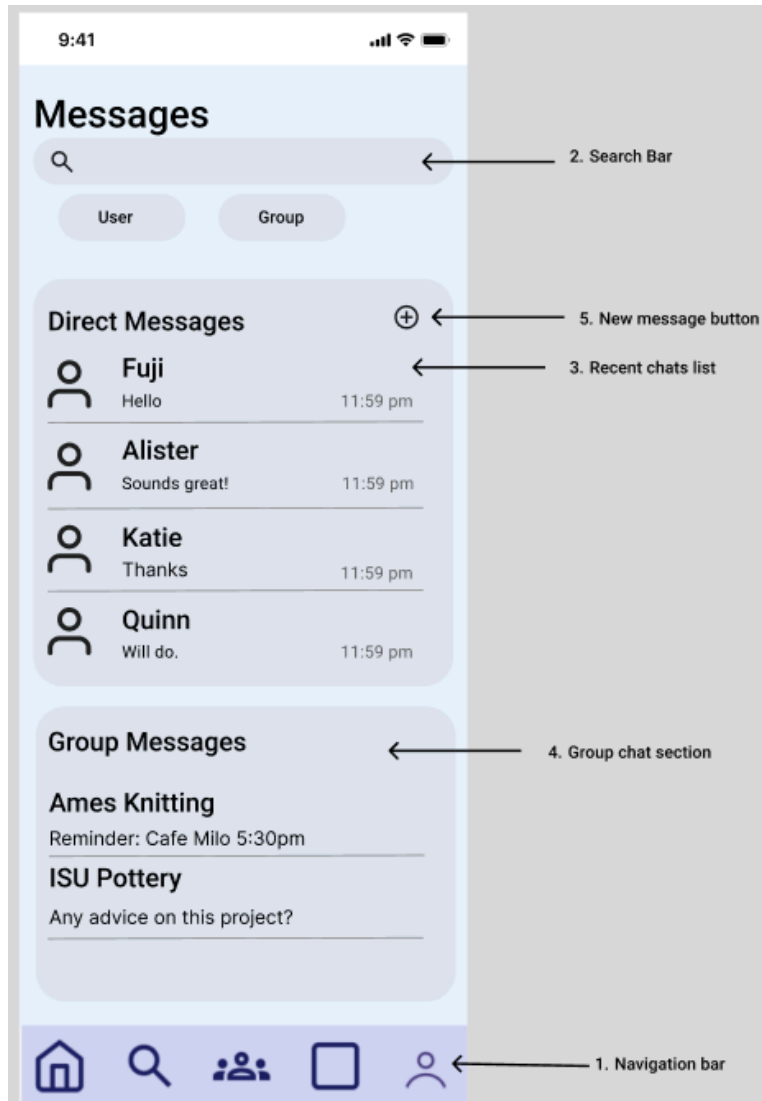

The search bar component allows users to quickly find specific information by entering relevant keywords. (1) It features a prominent text input field at the top of the interface, accompanied by a search icon to initiate the query. (2) Below the search bar, users can choose from multiple category tabs—such as Users, Groups, Projects, and Tutorials—to filter results by different types of content. (3) The search results are dynamically displayed as a visual preview, making it easy to identify relevant items within the selected category. The user can then select the desired users/groups/projects/tutorials to get more information, for example, select a specific user and send a follow request to follow the user. (4) A back button offers seamless navigation, allowing users to return to their previous profile page at any time. (5) A user profile icon on the top-right corner to allow the user to return directly to the profile page.

Tutorial Page - Alister Gan

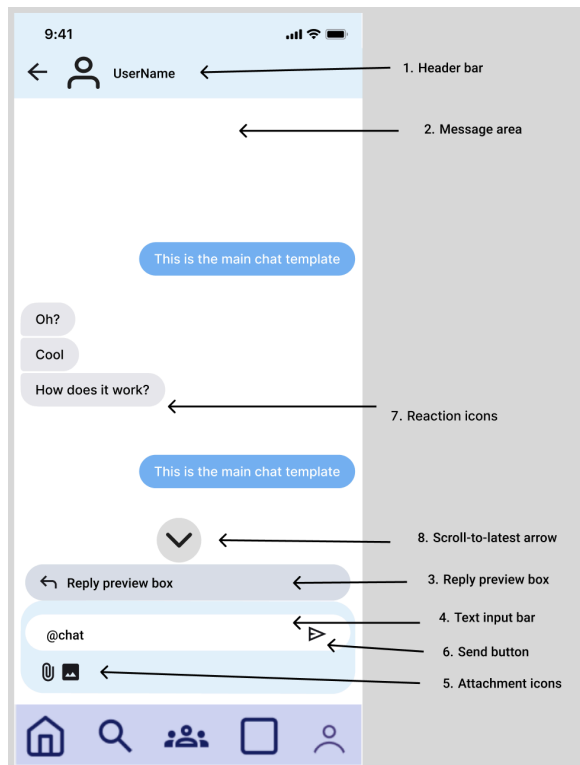

This tutorial upload interface allows users to easily create and share video tutorials. (1) At the top, users can click their profile icon to return to their profile page. (2) The main area features a video upload icon, making it simple to add a video by clicking the icon. Below, users provide the tutorial title (3) and provide a category of the tutorial (4) to help organize and classify the content. (5) There's a text area for adding a description or additional details about the tutorial. (6) Once the tutorial is ready, users can either edit or post the video using the provided buttons, streamlining the publishing process.

Messaging Home – Ji Xian Fu

This screen shows all active personal and group conversations. It updates live using a web socket connection. Users can view recent chats, open one, or start a new message thread. (1) Tabs for Feed, Search, Groups, Patterns, and Profile at the bottom for quick navigation. (2) Find friends or group chats by name or @username. (3) Displays chat name, last message preview, and timestamp. (4) Lists group conversations separately from direct messages. (5) Opens the Direct Message screen to start a chat.

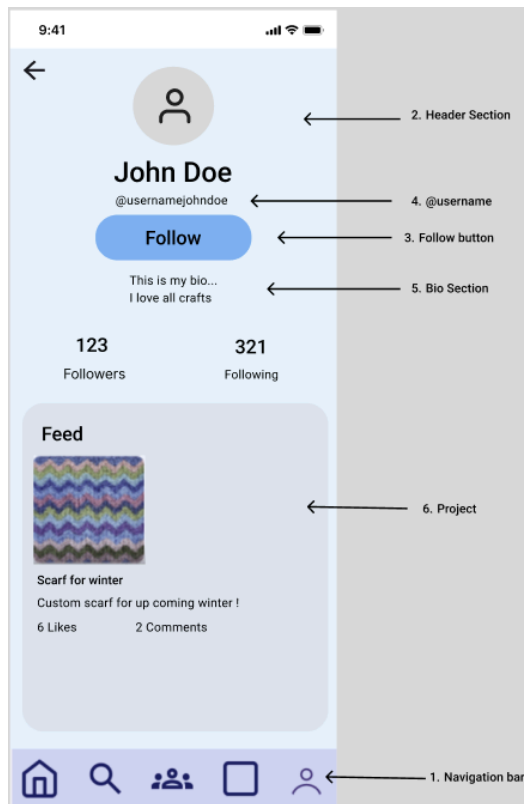

Direct Message – Ji Xian Fu

This screen allows two users or a group to exchange live messages, images, and files in real time through web sockets. It also supports @mentions and replies to older messages.

(1) Shows recipient name and profile picture with a back arrow to return to Messaging Home. (2) Scrollable chat bubbles that update instantly. (3) Appears when replying to an older message. (4) Multiline box to type messages and @tags. (5) Upload images, patterns, or PDF files. (6) Sends message immediately via socket. (7) Reaction icons. (8) Jumps to most recent message in chat.

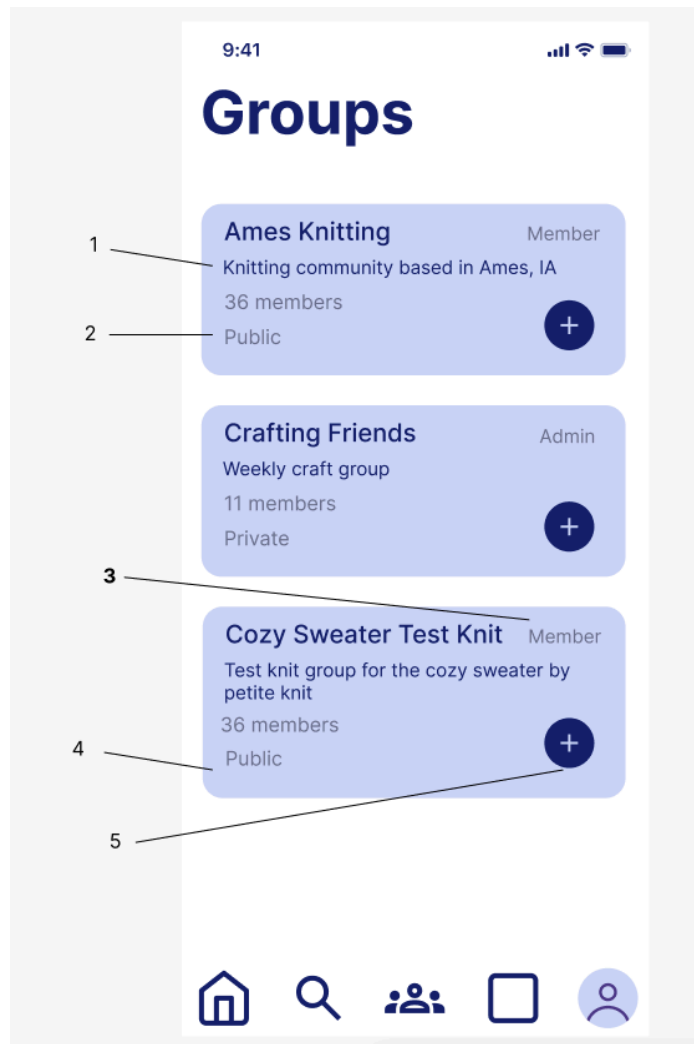

Foreign User Page – Ji Xian Fu

This screen shows another user's public profile, project.

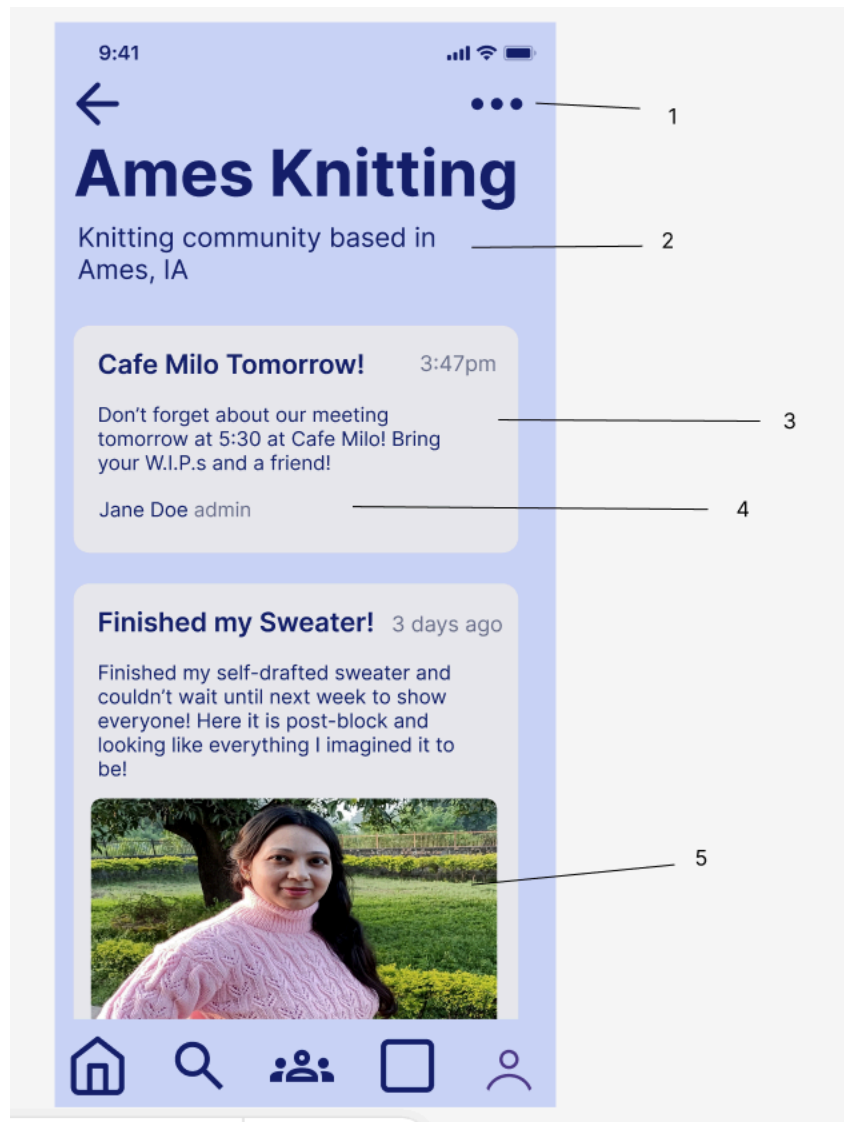

(1) Tabs for Feed, Search, Groups, Patterns, and Profile. (2) Profile photo, display name, and back arrow to previous page. (3) Follow or unfollow the user and see follower counts. (4) Handle used for mentions and DMs. (5) Short description of user. (6) Public project from a foreign user.

Groups Home Page - Kathryn Keck

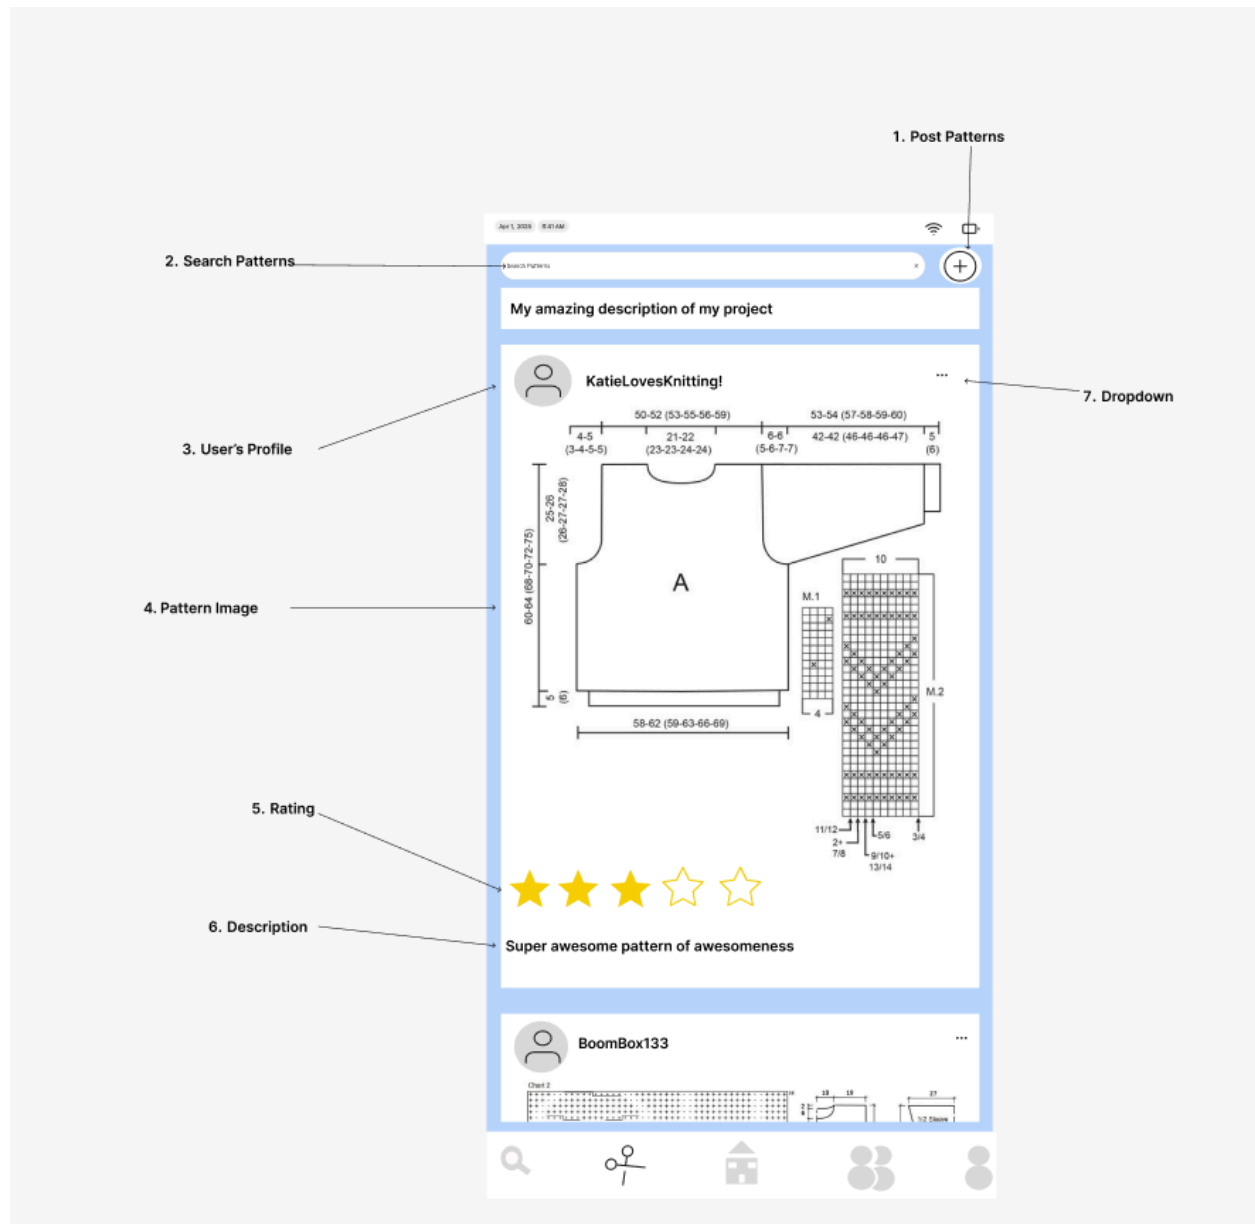

This screen allows a user to see all groups they are involved in. By clicking on any of the groups they enter into the groups feed page. (1) shows the title and description of the group. (2) shows how many total members are in the group. (3) shows what kind of member the user is, such as admin or member. (4) shows whether the group is private or public. (5) if you click on this button it allows you to create a post directly in the group.

Group Feed - Kathryn Keck

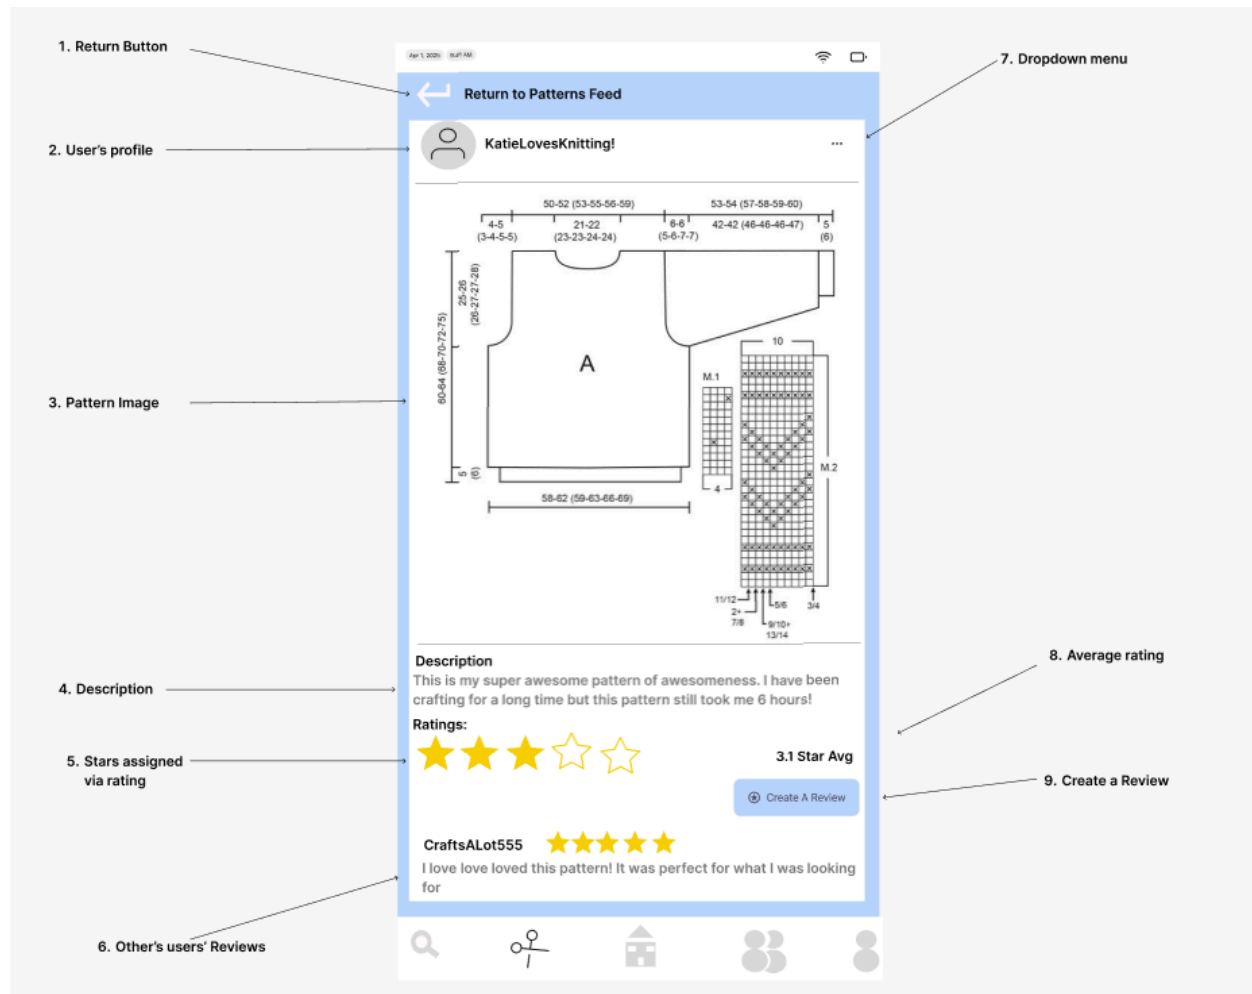

The group feed page shows the posts in a group the user is a member of. (1) allows you to see the options of a group. It allows you to leave the group, or allows an admin to kick people out of the group or see the details of the group. (2) is the description of the group. (3) is the most recent post in the group. (4) is the author of the post and her role in the group. (5) is another post including an image. This feed scrolls down, so right now you can only see part of the feed.

Patterns Feed - Quinn Weidenaar

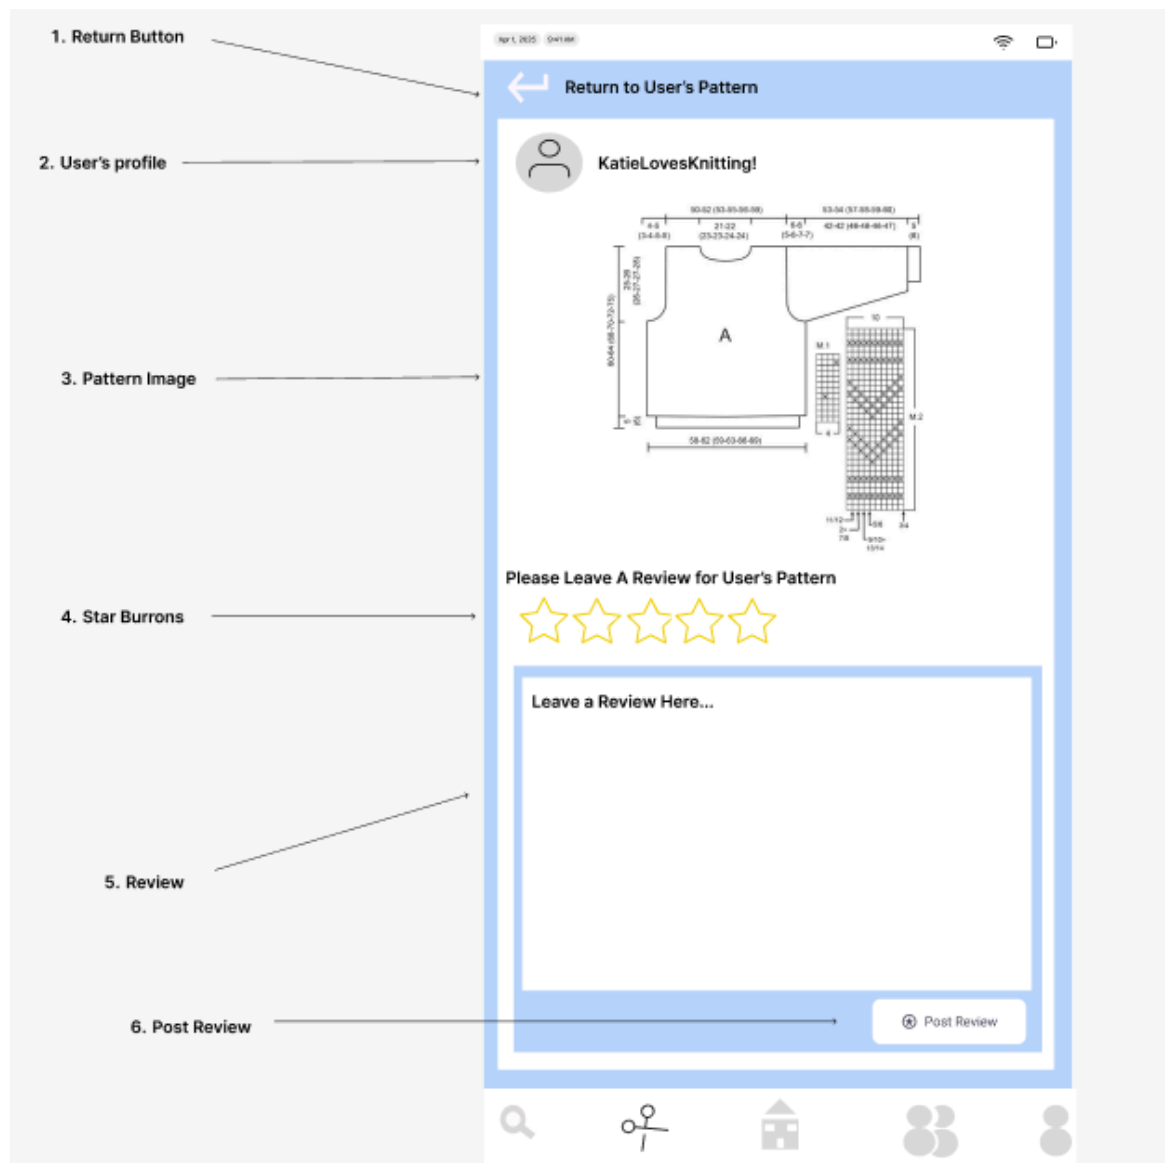

The Patterns Feed page allows the user to scroll through patterns that have been posted by users they follow. (1) Displays where a user is able to post their own pattern. (2) Displays where a user is able to search through their following users' patterns. (3) Displays the username of the user who posted the pattern. (4) Displays the image—or images—of the pattern. Each pattern has a rating (5), which is updated whenever another user leaves a review. (6) Displays the description of the pattern. A user is able to click on a pattern and open the pattern's information. When (7) is clicked on, a dropdown menu appears which can be used to report the pattern, block the user, etc.

Pattern Item - Quinn Weidenaar

The Pattern Item page allows the user to view a pattern's information: description, average rating, image, and reviews left by other users. (1) is the return button, on click this returns the user to their Pattern Feed. (2) is the username and profile photo of the user who's posted the pattern being viewed. (3) is the pattern image of the selected pattern and (4) is the description of the pattern. (5) displays the average rating in stars left by users, an average that is <0.5 will be an empty star and $<0.5 < 1$ will be a half a star. (6) is an example of a review that was left by another user on the selected pattern. When (7) is clicked on, a dropdown menu appears which can be used to report the pattern, block the user, etc. (8) is the average star rating, and the decimal is rounded to the tens place. On click, (9) opens another page where a user is able to leave their own review based on their experience with the pattern.

Pattern Review - Quinn Weidenaar

The Pattern Review page allows the user to leave a rating and review on another user's pattern. (1) allows the user to return to the Pattern Item page of the Pattern the user is currently reviewing, on click. (2) is the username and user profile picture of the user who owns the pattern and (3) is the image of the pattern being reviewed. (4) are interactive star buttons where the user is able to leave a review between 1 - 5 stars—1 being not liked and 5 being liked. (5) is the review section—where a user is able to write about the rating they left the pattern, this section is not required for the user to post a rating. (6) is where the user is able to post the rating, and if the review box has any text, a review; this information will be displayed on the Pattern Item page.
